

RPM

Building Brands Across America

Online. RPM puts you totally in the loop with real-time information available at your fingertips.

RPM offers real-time inventory monitoring via its online Interactive Inventory website. Client-Specific and password-protected, the Website allows customers to collaborate, view and manage information instantly across the Internet. The website coordinates, manages, and documents the project from beginning to end, with daily updates from field teams and offices.

RPM Inventory Order

?? Order inventory online for your project

RPM Inventory Level Tracking

?? You have the ability to track your inventory levels and receive notifications when it is time to reorder from the comfort of your office.

RPM Multiple Warehouse Tracking

?? Track your inventory levels, orders, and shipments through multiple warehouses throughout the nation.

RPM Receive Inventory

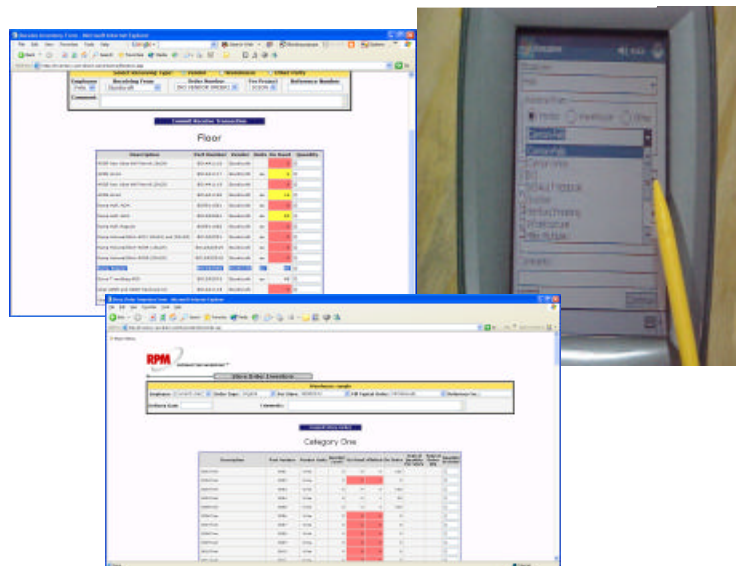

?? See when your inventory is received at the warehouse level.

RPM Scanner Technology

?? When inventory is received scanner automatically loads information into Interactive Inventory Website.

RPM Store Orders

?? When inventory is shipped out and arrives at the store level a report is made to allocate that product.

Resource Asset Management– (RAM)

Track your assets and make sure they get to the store! Know what time it arrives!

In today’s retail world, the need to know where your product is located is crucial. Studies say that sometimes up to 70% of P.O.P. displays may never get installed “in store”. By using RPM and its web-based RAM system, you can virtually see where your product is and when it’s installed at any time. What more can you ask for to guarantee product and display delivery and it’s “in store” effectiveness?

- ?? View all team movement on the project across the country
- ?? Zooming capabilities give you a full US Map or allow you to drill down to a particular location.
- ?? Track what time the team is at each location. You can also see the location details.

- ?? Push work orders out to teams in the field on the fly.
- ?? Track what time your product was placed at the exact location.
- ?? Retrieve real time information on asset inventory information.
